

HELP PROTECT THE FALLS CREEK WASTEWATER SYSTEM FROM UNWANTED GREASE & FATS

Commercial and private kitchens in the Resort are a large contributor to unwanted sources of grease and fats which can cause significant damage to the Falls Creek wastewater treatment plant.

We need your help to ensure that unwanted grease and fats don't end up in the wastewater treatment plant as it can cause the treatment plant to malfunction and interrupt the safe treatment of wastewater.

Commercial and private kitchens are the biggest contributors to unwanted greases and fats in the resort. Because of this, we ask that you assist in prohibiting these fats from entering the wastewater treatment plant.

You can help by doing the following:

- Using the grease and fat recycling stations in the resort.
- Pouring all grease and fats into suitable containers that are placed in easily accessible spots to ensure all grease is removed before washing dishes in the sink.
- Ensure all commercial grease traps are cleaned out on a regular basis such as before and after each snow season.

Please dispose of all grease and fats in a container and place this sealed container in the rubbish hutches for collection. Do not put grease and fats down the sink or toilet.

By following these steps, you can take part in helping keep our water and environment clean from unwanted grease and fats.

We thank you for your ongoing assistance.
